

# YOUR FIRE & SECURITY SYSTEMS PARTNER

INTRUDER • FIRE • CCTV • ACCESS CONTROL

# ABOUT US

---

APM Fire and Security is a local, family-run business that was created because we love what we do - working to help safeguard people and property while providing a commitment to our customers through close relationships and trust.

With over 25 years of experience we expertly design, install, commission and maintain fire and security systems using market leading products supported by our team of dedicated engineers and support staff.

It doesn't stop there. We are constantly striving to adopt the latest technologies, systems and standards to ensure you are protected to the highest possible standard.

Meeting your exact requirements is central to what we do. We will ensure your system is individually designed, installed or maintained with high quality workmanship and support you with a personal and high standard of customer care all at a sensible and sustainable price.

Whether it's for your organisation, small business or home, we would love to talk to you and become your partner of choice for your fire and security systems.

## SERVICES

---

### SYSTEM DESIGN

We design and specify systems to meet the latest fire and security standards so you can be reassured that you are properly protected at a sensible price. Our experience in system design ranges from large commercial premises through to the domestic properties.

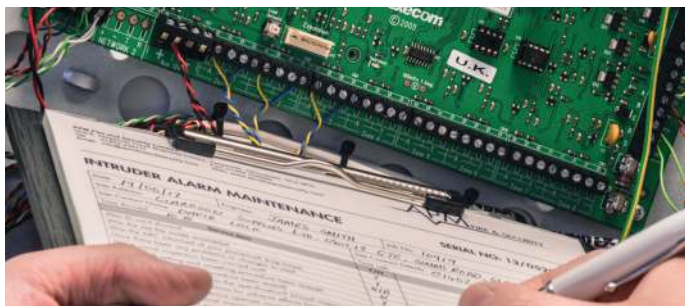

Our in-house designers are accredited by the FIA to design, install, commission and certify fire detection and alarm systems.

### INSTALLATION & COMMISSIONING

Our experienced team ensure that each and every system we design is installed to exacting standards, commissioned, certified and handed over to the customer to meet their full expectation.

Whether we are installing in a multi-building manufacturing site or a customer's home, our engineers are experts at cabling systems so that you wouldn't know they were there.

### MAINTENANCE & MONITORING

Legislation and many insurers often insist that your system is serviced and maintained on a regular basis.

We take a preventative approach to ensure your system remains operating as originally intended so as to reduce the unlikely surprise of system failures and call outs.

We also install and takeover monitored and unmonitored systems to ensure you, keyholders and/or the Police are notified of an alarm activation.

### SYSTEM TAKEOVERS

If you are looking to have an existing system cared for by another service provider we're only too happy to help. Whether it's recently installed or an older system, our experience ensures we can support most systems. We'll always give you our best possible price and we won't tie you into a long-term agreement.

# FIRE SYSTEMS

## DETECTION AND ALARM SYSTEMS

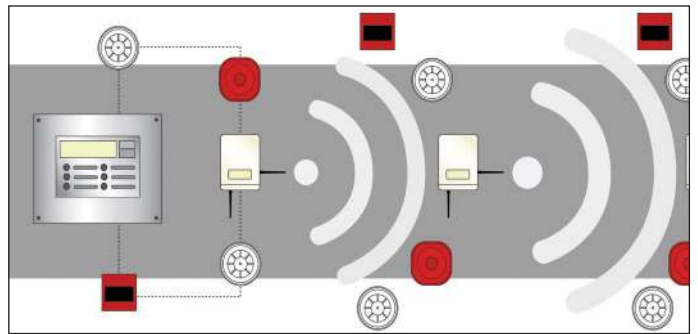

As an accredited BAFE SP-203 Part 1 fire detection and alarm company, we design, install, commission and service many types of systems and we're even accredited to verify installations by other non-registered companies.

We design and install a comprehensive range of open protocol fire detection and alarm system for total flexibility, both monitored and unmonitored. Our system designs are focused on reliability and meeting the specific requirements of your fire risk assessment.

## WIRELESS DETECTION SYSTEMS

For locations that are sensitive to installation techniques (such as older buildings with no access for cabling, asbestos containing environments, busy areas, or where the speed of installation is a priority) we offer wireless fire detection and alarm systems that utilise the latest wireless technologies to provide a rapid, reliable, flexible and economic solution with the minimum disturbance to the surroundings.

## FIRE EXTINGUISHERS

Fire extinguishers are often your first line of defence in protecting yourself from a fire in the event of one blocking your exit. They should be serviced annually to ensure that they'll work first time in the unlikely event you'll need them.

We supply, install and service the full range of fire extinguishers and fire blankets to give you total peace of mind.

# SECURITY SYSTEMS

## INTRUDER DETECTION & ALARM SYSTEMS

Our intruder detection and alarm systems are individually designed and carefully installed to meet the particular risks to your premises and to the rigorous standard of PD6662:2017 & EN50131.

As an NSI accredited company, we install a variety of grades of system with or without remote monitoring via a monitoring station and where required with police response.

The intruder detection and alarm systems we offer can also integrate with panic alarms, access control and CCTV systems and depending on your site, can be wired, wireless, or a combination of both.

In addition to installation, we're equally happy to take over the maintenance of your existing system ensuring it remains in full working order.

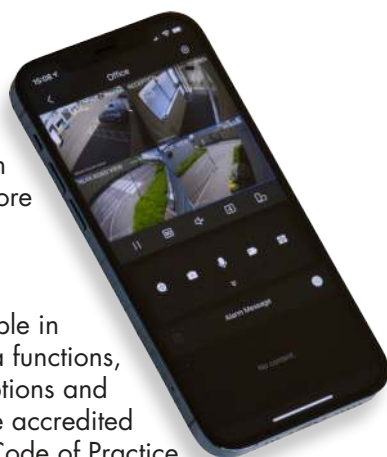

## CCTV SYSTEMS

The latest generation of CCTV now provides high quality recordings in full High Definition giving you even more detail for monitoring and investigations.

Our CCTV systems are scalable in size offering different camera functions, night-time vision, recorder options and back-up solutions and we are accredited to install systems to the NSI Code of Practice NCP 104.

Our systems are also capable of remote viewing via a web-based application on a computer, tablet or smartphone - ideal for those wanting to keep an eye on activities while away from work or the home.

## ACCESS CONTROL SYSTEMS

Whether you are looking for a simple keypad entry control system, intercom, video entry system or a site-wide fob-access control system managed in the cloud and/or linked to your CCTV system, we offer a solution to help you manage access to any area by staff or visitors.

Our access control systems are designed to meet the exact needs of each customer using world-leading brands and they can be installed to the recognised NSI Code of Practice NCP104 / BS EN 50132-7.

We can also support your existing access control installation.
